PLAN SHEET

Measuring for your new ALW Synthetic Lawn

Firstly, draw an outline of your area on the ALW downloadable PDF measuring sheet. 2 boxes equal 1 centimetre and 1 centimetre represents 1 metre ie 1:100. Please take as many measurements as possible, you can never get too many measurements, our objective is to minimise any waste or un-necessary off-cuts. Synthetic lawn has a "one direction pile" meaning it must be laid and joined in the same direction to avoid nasty looking joins.

Ensure you measure...

- All straight edges (show all measurements on plan)
 - Longest and widest points (show over-all measurements on plan)
 - Shortest and narrowest points (show over-all measurements on plan)
- Mark as many areas on the plan that do not have a hard edge to butt up to. I.e: no paving, concrete, paths or curbing for the lawn to butt up to - Draw these in a broken line.

Also mark...

- any trees
 - water metres
 - garden or flower beds that are going to remain
 - sloping areas
- ...anything else that may be an obstruction or you feel may affect the laying or calculating of your new ALW Synthetic Lawn

Notes to production:
